The CYK Algorithm

- The membership problem:
 - Problem:
 - Given a context-free grammar G and a string w
 - $-\mathbf{G} = (V, \Sigma, P, S)$ where
 - » V finite set of variables
 - » ∑ (the alphabet) finite set of terminal symbols
 - » P finite set of rules
 - » S start symbol (distinguished element of V)
 - » V and Σ are assumed to be disjoint
 - G is used to generate the string of a language
 - Question:
 - Is w in L(G)?

The CYK Algorithm

- J. Cocke
- D. Younger,
- T. Kasami

 Independently developed an algorithm to answer this question.

The CYK Algorithm Basics

 The Structure of the rules in a Chomsky Normal Form grammar

Uses a "dynamic programming" or "table-filling algorithm"

Chomsky Normal Form

- Normal Form is described by a set of conditions that each rule in the grammar must satisfy
- Context-free grammar is in CNF if each rule has one of the following forms:

```
-A \rightarrow BC at most 2 symbols on right side
```

- $-A \rightarrow a$, or terminal symbol
- $-S \rightarrow \lambda$ null string

where B, C \in V – {S}

- Each row corresponds to one length of substrings
 - Bottom Row Strings of length 1
 - Second from Bottom Row Strings of length 2

•

– Top Row – string 'w'

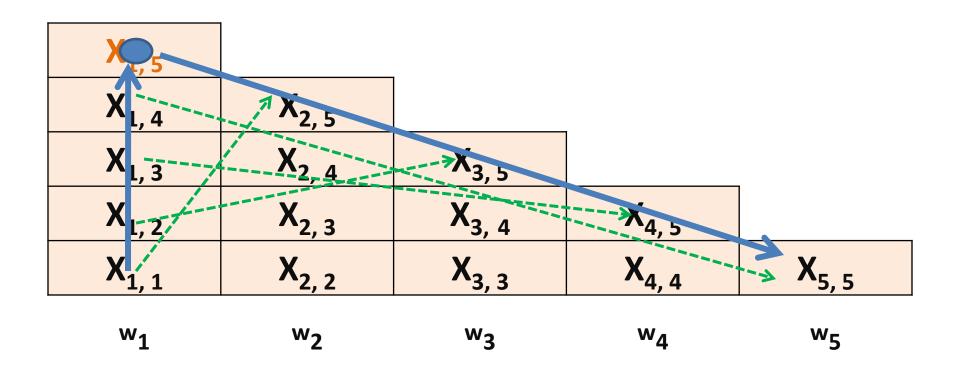

X_{i, i} is the set of variables A such that
 A → w_i is a production of G

 Compare at most n pairs of previously computed sets:

$$(X_{i,i}, X_{i+1,j}), (X_{i,i+1}, X_{i+2,j}) ... (X_{i,j-1}, X_{j,j})$$

X _{1,5}				
X _{1,4}	X _{2,5}			
X _{1,3}	X _{2, 4}	X _{3,5}		
X _{1, 2}	X _{2,3}	X _{3, 4}	X _{4,5}	
X _{1, 1}	X _{2, 2}	X _{3,3}	X _{4, 4}	X _{5,5}
w_1	w ₂	w ₃	w ₄	w ₅

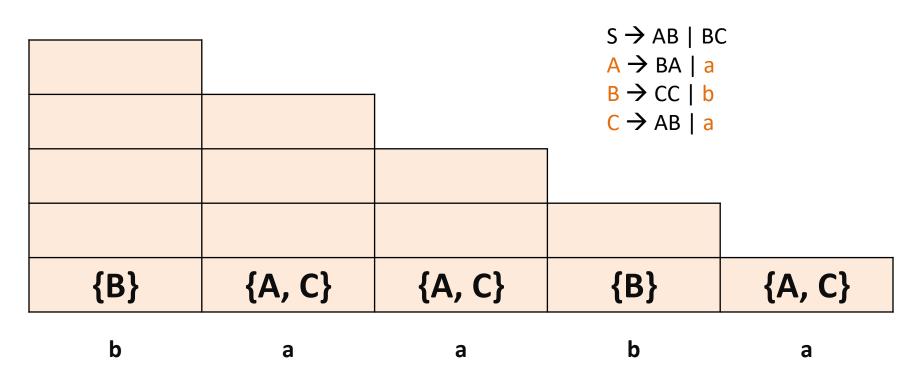

Table for string 'w' that has length 5

Looking for pairs to compare

Example CYK Algorithm

- Show the CYK Algorithm with the following example:
 - CNF grammar G
 - $S \rightarrow AB \mid BC$
 - A → BA | a
 - B \rightarrow CC | b
 - C → AB | a
 - w is baaba
 - Question Is baaba in L(G)?

Calculating the Bottom ROW

- $X_{1,2} = (X_{i,i}, X_{i+1,j}) = (X_{1,1}, X_{2,2})$
- → {B}{A,C} = {BA, BC}
- Steps:
 - Look for production rules to generate BA or BC
 - There are two: S and A
 - $-X_{1,2} = \{S, A\}$

```
S \rightarrow AB \mid BC
A \rightarrow BA \mid a
B \rightarrow CC \mid b
C \rightarrow AB \mid a
```

b	а	а	b	а

- Table for string 'w' that has length 5
- The algorithm populates the triangular table

Example (Result)

Is baaba in L(G)?

Yes

We can see the S in the set X_{1n} where 'n' = 5 We can see the table the cell X_{15} = (S, A, C) then if S $\in X_{15}$ then baaba $\in L(G)$
